1 Ravenous Squirrel 1
1 Viscera Seer 1
1 Woe Strider 3

DRAIN PAYOFFS (11)

1 Bastion of Remembrance 3
1 Blood Artist 2
1 Dina, Soul Steeper 2
1 Marauding Blight-Priest 3
1 Marionette Apprentice 2
1 Mirkwood Bats 4
1 Nadier's Nightblade 3
1 Prosperous Innkeeper 2
1 Valley Rotcaller 2
1 Vito, Thorn of the Dusk Rose 3
1 Zulaport Cutthroat 2

FINISHERS & EQUIPMENT (3)

1 Blade of the Bloodchief 1
1 Bloodletter of Aclazotz 4
1 Gruesome Fate 3

CHATTERFANG — PILOT'S GAMEPLAN

0. The one-paragraph version

You are a **mana and body economy**. Chatterfang turns every token you make into two, Cryptolith Rite and Gaea's Cradle turn that board into mana, and the sacrifice outlets turn it into damage. Drain is the primary plan and nothing you do *requires* combat — but **attacking is close to free here, so treat a wide board as a real second route**. A token that gets blocked and trades fires every death trigger you own (Blood Artist, Zulaport, Bastion, Mirkwood Bats, Nadier's Nightblade, Poison-Tip Archer, Marionette Apprentice) and the life each one gains feeds Vito, Dina and Blight-Priest. Removing a blocker just means the rest connects. **Either way you are draining.**

1. The curve you actually have

	MV≤1	MV2	MV3	MV4	MV5	MV6+	avg
Nonland (64)	9	21	19	10	4	1	2.73

MV≤2 is 30 cards. This is a **lighter** deck than the Edgar sacrifice list (2.90) — you should have a play every turn from turn 1.

2. The three numbers to track

- Tokens on board.** One number. Everything scales off it — Gaea's Cradle, Three Tree City, Cryptolith Rite, Gruesome Fate, Valley Rotcaller.
- Life-gain EVENTS this turn, not life gained.** Dina, Marauding Blight-Priest and Prosperous Innkeeper count *sources*. Ten tokens dying with Blood Artist + Zulaport + Bastion out is **thirty separate events**, so Dina and Blight-Priest each fire thirty times.
- Is Bloodletter out, and is it your turn?** If yes, every number above doubles.

3. Opening

T1–T2: Llanowar Elves (turn-2 Chatterfang), Bitterblossom, Blade of the Bloodchief, Viscera Seer, Carrion Feeder, Ravenous Squirrel, Arcane Signet. Bitterblossom on turn 2 is a Faerie *and* a Squirrel every upkeep for the rest of the game.

T3 — the fork:

- No board → **Chatterfang**. He is the engine; everything after him is worth double.
- Board already → **Cryptolith Rite** (now every token taps for mana) or **Parallel Lives**.
- Long game → **Tendershoot Dryad** or **From Beyond**.

T4–T6: deploy a drain payoff under an existing board, not the other way around. A Blood Artist with nothing to sacrifice is a 0/1.

Mulligans. Keep 3 lands with both colours and a 1–2 drop. Ship hands with no token source before turn 3 — the drain half of the deck does nothing alone.

4. The sacrifice decision tree

Sacrifice when: you have a free outlet and *any* drain payoff; in response to targeted removal; in response to a wrath (Plumb the Forbidden converts the board into a fistful of cards).

Do NOT sacrifice when: no payoff is on the battlefield — you are just losing bodies; or Dina, Blight-Priest or Prosperous Innkeeper would die in the same event, because "**whenever you gain life**" has **no look-back** and they must be alive as each gain happens. Blood Artist and Zulaport are fine dying in the same wipe — dies-triggers look back.

5. The engine to look for

Free outlet + Blood Artist + Zulaport + Dina. Each token sacrificed is: 1 focused (Artist), 1 to each (Zulaport), and 2 more to each from Dina (two separate gain events). With Blight-Priest that is 4 to each per token. **Roughly 13 across the table per 1/1**, doubled by Bloodletter.

5b. Landfall — every land is a token and a Squirrel (added 2026-09-25)

Chatterfang adds a Squirrel to every token, and four cards make a token per land. Tireless Provisioner makes a Food or Treasure, Tireless Tracker makes a Clue (card draw), Scute Swarm makes an Insect (a copy of itself once you have six lands), and Avenger of Zendikar makes a Plant per land when it enters, then puts a counter on each Plant per land. **Oracle of Mul Daya** gives a second land drop and lets you play lands off the top of your library. **Verdant Catacombs** and **Misty Rainforest** are two landfall triggers each (the fetch, then the land it finds). Misty finds a Forest or Overgrown Tomb.

One land with Provisioner + Tracker + Scute Swarm out = Treasure, Clue, Insect **and three Squirrels**. A fetchland is twice that.

6. Sequencing within your turn

1. **Upkeep** — Bitterblossom, Tendershoot Dryad, From Beyond, Chitterspitter. With Oracle of Mul

Daya out, check the top of your library before you draw.

1. **Main 1 — Bloodletter FIRST if you have it.** Then landfall payoffs, **then** your land drop(s),

then the other token makers, then the payoff.

1. **Tap for value before you sacrifice** — Gaea's Cradle and Three Tree City read the board, and a

sacrificed Squirrel is one less mana. Cryptolith Rite means a token can tap for mana *and then* be sacrificed.

1. **Sacrifice in the second main**, once the board is as wide as it will get.

2. **Idol of Oblivion** needs a token created this turn — draw before you wipe your own board.

7. The kill

Gruesome Fate with 20 creatures is 20 to each opponent, 40 with Bloodletter. **Cast it before you sacrifice**, not after — it counts creatures you *control*.

Otherwise: build to 15+ tokens, then in one turn sacrifice everything to Ashnod's Altar with three drainers out. Second Harvest doubles the board first if you have it.

8. The finish — two combos, one big turn

8a. The fast loop — Chatterfang + Pitiless Plunderer (live from turn 4)

Added 2026-09-24 when the pilot opted in to combos. Pull Plunderer if the pod objects.

With **Chatterfang + Pitiless Plunderer** out and one Squirrel:

1. Activate Chatterfang: , sacrifice 1 Squirrel → target creature gets +1/−1.
2. The Squirrel dies → Plunderer makes a **Treasure** → Chatterfang adds a **Squirrel**.
3. The Treasure pays the next . Repeat as many times as you choose.

Per iteration: one death, −1 toughness on a creature you target, nothing spent. Every drainer fires each time. With **Ashnod's Altar** as the outlet instead, each death also nets   — infinite colourless mana.

- **Aim the −1s at the biggest blocker or commander first.** The loop is also a one-sided sweeper.
- **No opposing creature to target?** Target the Squirrel you are about to sacrifice. Targets are

chosen before costs are paid (CR 601.2c, 601.2h), so the ability then does nothing (608.2b) — but the sacrifice already happened, so Plunderer still triggers.

-  It assembles on **turn 4**. Tell the table it's in the deck; official Bracket 3 rules out early

two-card combos, and the pod's reaction is the test.

8b. The Food loop (assembles ~turn 8+)

Camellia, the Seedmiser + Tippy-Toe OR Peregrin Took + Ashnod's Altar, plus one Food and any drain payoff. 10 mana to assemble (9 with Took); the Altar is already a staple you want anyway.

Each iteration, all inside **one step** (mana empties between steps):

1. Sacrifice a Squirrel to **Ashnod's Altar** →  . (*a creature died — every drainer fires*)
2. Crack a **Food**: pay , tap it, sacrifice it → gain 3 life.

(*Vito drains 3 from one opponent · Dina 1 to each · Blight-Priest 1 to each*)

1. **Camellia** triggers off that sacrifice and makes a Squirrel.
2. **Apply the Food-adder FIRST, then Chatterfang.** Food-adder first = **3 Squirrels + 1 Food**.

Chatterfang first = only 2 Squirrels. This is a free body every loop and it is easy to get backwards.

1. You are back where you started with a spare Food. Repeat as many times as you choose.

Net per iteration: +2 Squirrels, Food replaced, mana neutral, +3 life, one creature dies. Without Chatterfang it is exactly neutral on bodies — but still +3 life and one death per loop, so **it is still lethal with a drain payoff even if your commander is gone.**

 Announce each iteration; opponents get priority between them. Stop when the table is dead.  New Squirrels are summoning sick — they **cannot attack** this turn, but they **can** be sacrificed, because sacrificing involves no tapping.

Bonus line: Camellia's own , **Forage** can pay by sacrificing a Food, which re-triggers her. Same loop, plus a **+1/+1 counter on every other Squirrel each iteration** — that version wins through combat as well as drain.

With **Academy Manufactor** out the Food the loop returns becomes Clue + Food + Treasure, so each iteration is far bigger. With both Tippy-Toe *and* Peregrin Took you net an extra Food per loop too.

8c. No combo? Then the big turn

The Unbeatable Squirrel Girl. 1🐿🐿🐿: create X Squirrels, where X is the number of Squirrels you control — and Chatterfang matches that number again, so each activation roughly **triples** your Squirrel count.

Squirrels before	After one activation
5	15
10	30
20	60

Mana from **Cryptolith Rite** (older tokens only — anything made this turn is summoning sick), **Gaea's Cradle**, **Three Tree City** naming Squirrel, and **Hazel of the Rootbloom**, whose ability taps tokens as a cost and so ignores summoning sickness. Hazel and the Cradle are once per turn.

Then convert: sacrifice the board to Ashnod's Altar with three drainers out, or cast **Gruesome Fate** first, which reads your creature count. **Second Harvest** doubles the board before any of it.

9. Mistakes to avoid

- 1. **Sacrificing with no payoff out.** The most common way to lose this deck.
- 2. **Forgetting Chatterfang applies to non-creature tokens.** Treasures, Foods, Clues, Servos — every

one brings a Squirrel. Deadly Dispute makes two bodies, not zero.

- 1. **Wiping with Toxic Deluge or Meathook while Dina / Blight-Priest / Innkeeper are on board —**

they die and give you nothing.

- 1. **Casting Gruesome Fate after the board is gone.**
- 2. **Tapping Gaea's Cradle after you sacrifice.** Tap first.
- 3. **Forgetting Mirkwood Bats triggers twice per token —** once on create, once on sacrifice.
- 4. **Applying Chatterfang BEFORE the Food-adder.** Tippy-Toe or Peregrin Took must be applied first

or you lose a Squirrel every single time. See §8.

- 1. **Running the Plunderer loop with no drainer out** when a turn's wait would add one. It is a

board wipe for them either way, but the kill needs Blood Artist, Zulaport or Bastion.
